

pdfer Kitchen-Sink Demo

A comprehensive feature test for the pdfer pure-Go PDF library

This document was generated entirely in Go using pdfer v0.9.10,
a zero-dependency pure-Go PDF library. It exercises:

- â€¢ Text rendering (multiple fonts, sizes, colours, spacing)
- â€¢ Vector graphics (paths, rectangles, curves, fills, strokes)
- â€¢ PNG image embedding
- â€¢ Watermarks
- â€¢ Annotations (all 14 subtypes)
- â€¢ AcroForm fields (text, checkbox, radio, dropdown, button)
- â€¢ Bookmarks / outline
- â€¢ Document metadata
- â€¢ AES-128 write encryption

AcroForm Field Type Catalog

One example of every supported AcroForm field type. Open in a PDF viewer to interact.

SELECTION FIELDS

Single-line text (empty)

No default value set

Single-line text (pre-filled)

Checkbox (unchecked)

Default off

Checkbox (pre-checked)

Default: "Alice Smith"

Multiple text area

Default on & Value = "Yes"

Radio group (pick one)

Option A

Option B

Option C

Wraps and scrolls vertically

Password field

CHOICE FIELDS

Input obscured with bullets

Required text field *

Marked required; * shown above

Read-only field

Dropdown (combo box)

Selected: "Canada"

List box (always visible)

Cannot be edited

Max-length field (10 chars)

Shows multiple rows; scroll to see more

BUTTONS

MaxLen=10; viewer enforces limit

Push button

No value; triggers actions

* Required field. All fields generated with pdfer & pure-Go zero-dependency PDF library.

Layout TextBox / Table / Columns

Demonstrates DrawTextBox, DrawTable, and NewColumnLayout from core/write.

1. Word-wrapped text box (DrawTextBox)

pdfer's DrawTextBox helper wraps arbitrary text at word boundaries to fit within a specified column width. Each line is emitted as an independent BT/ET text block positioned with an absolute text matrix, so lines are never split mid-word. Alignment (left, centre, right) is supported. This paragraph is rendered into a 300 pt wide box at 11 pt Helvetica with 1.2^ leading.

Right-aligned text in a narrower box, also word-wrapped.

2. Table (DrawTable)

Component	Status	Version	Notes
pdfer core	â Stable	v1.4.0	Pure Go, zero deps
AcroForm	â Stable	v1.4.0	Parse, fill, flatten
XFA forms	â Stable	v1.4.0	Extract, fill, XML export
Signatures	â Stable	v1.3.0	PKCS#7, TSA, LTV
Content extraction	â Stable	v1.2.0	Text, images, tables
File attachments	â New	v1.4.0	EmbedAttachments API
Table writing	â New	v1.4.0	This page!

3. Multi-column layout (NewColumnLayout)

Column layouts divide a fixed-width region into uniform columns with a configurable gutter. Each column tracks its own Y cursor so content can be placed independently.

The ColumnLayout helper exposes DrawTextBox and DrawTable methods that advance the cursor automatically, so callers only need to choose a column index.

BalanceColumns() aligns all cursors to the lowest column, useful for drawing a horizontal rule below a multi-column block without manually tracking each cursor.
